

LucentAD | A Guide for Patients & Caregivers

If you or someone you love has concerns about memory or thinking ability, talk to your physician about a simple blood test that may help determine the reason for your concerns and what can be done about it.

LucentAD is a breakthrough low-cost test that can help identify or rule out the presence of Alzheimer's disease.

900 Middlesex Turnpike, Building 1
Billerica, MA 01821

The LucentAD test was developed and validated by Quanterix Corporation (CLIA# 22D1053083) in a manner consistent with CLIA requirements. The test has not been cleared or approved by the U.S. Food and Drug Administration.

Recent scientific advances have opened new options for the detection, diagnosis, and treatment of Alzheimer's disease. Alzheimer's disease is a neurological condition that can cause a decline in memory and thinking ability. While there are many possible causes of memory and thinking problems, if Alzheimer's disease is present, its early detection is important to realize the potential benefits of available therapies and best approaches for managing the disease. The LucentAD test detects the presence of a protein called phosphorylated tau (p-Tau) in blood that has been shown to be associated with the presence of Alzheimer's-related changes in the brain.

The evidence supporting the accuracy of the LucentAD test has been published in scientific journals including clinical studies spanning thousands of patients. The data from these studies support the use of the p-Tau protein detected by the LucentAD test in the diagnostic assessment of individuals with memory changes and suspected of having Alzheimer's disease.

LucentAD uses a highly sensitive detection technology. So, only a small blood sample is required, and the test is simple to administer. Results should be available to your healthcare provider within 10 business days.

The Importance of Knowing

If Alzheimer's disease is behind the memory or thinking symptoms being experienced by you or a loved one, it is important to know this as early as possible because therapeutic interventions, including lifestyle modifications that can slow the disease, are more effective in the early stages of the disease.

For more information on the importance of a timely diagnosis of Alzheimer's disease, see www.alzint.org.

Consult your healthcare provider to determine if you should get a LucentAD test.

Paying for the Test

LucentAD is a new test and is not currently covered by private insurance, Medicare or Medicaid. Patients are responsible for paying for the test out-of-pocket. You will be billed directly by your healthcare provider after your testing is complete.

Getting the Test

Step 1

Healthcare provider orders the LucentAD test kit and schedules a blood draw appointment for the patient.

Step 2

Blood sample is sent to the Lucent Diagnostics laboratory for analysis.

Step 3

Healthcare provider receives the LucentAD test report and discusses the results with the patient.
